2019-03-08

During the month of February, the work on finalizing the installation of Cortus’s plant has been completed. Final inspection and approval of the installation was accomplished by Höganäs AB in early March. The completion of the assembly work is milestone 1 of 3 in our agreement with Höganäs. Cortus has also been granted a permission from KIWA (third party reviewer) to begin tests with natural gas. This is a prerequisite for getting started with hot tests.

The plant is now ready for commissioning and cold tests have been initialized. We are now entering a test phase where both the plant’s performance and various fuels will be evaluated. The test plan is divided into six parts and is expected to continue during 2019:

1. Cold tests of the plant
2. Hot tests of the plant with natural gas
3. Hot tests of the plant with pyrolysis gas
4. Test syngas production
5. Test syngas delivery
6. Demonstration and verification phase of syngas delivery

Cortus published a press release regarding the progress in Höganäs on March 4th, 2019 at 12:00PM, which can be read (in Swedish) in its entirety in the link below:

Next update is planned to beginning of April 2019.
